

APR -7 1917

The new war engine, the caterpillar tractor, which, invented by a Chicago man, is now in use on the European battlefields, is demonstrated in the Universal Screen Magazine, Issue No 15. Then comes a diamond back terrapin hatchery, where the epicurean dish is grown for the consumption of millionaires. The primitive method of delivering milk in Tampa, Florida, follows. There is no cost of running, for the cows are just led from door to door, and milked on the spot. Molding Rockwood pottery, by the old method, in which the hands and a tiny stick were the only tool used, and the new which employs molds into which the clay is poured comes next. Time savers in domestic science are demonstrated by Mrs A Louise Andrea, the Screen Magazine's cooking expert. She shows how apples are cored, potatoes cut for french frying, and hard boiled eggs are sliced in a flash. The reel ends with a short comedy called "Trench Warfare in the Sahara."
